SUMMARY

Computer Science Engineering student and aspiring Software Development Engineer with hands-on experience developing full-stack web applications, REST APIs, real-time systems, and cloud-deployed platforms. Strong foundation in Data Structures & Algorithms (Java), OOP, DBMS, Operating Systems, and Computer Networks.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript (Basic), React (Basic)

Frameworks & Libraries: Next.js, Node.js, Express.js, FastAPI, Flask, Django, Redux Toolkit, Tailwind CSS, REST APIs, JWT

Databases: SQL, NoSQL, PostgreSQL, MongoDB, Neon, Prisma ORM

Cloud & DevOps: AWS, Docker, Kubernetes, Terraform, GitHub Actions, CI/CD, Prometheus, Grafana, Jaeger

ML / Data & Tools: Pandas, NumPy, Scikit-learn, SpaCy, Git, GitHub, Postman, NextAuth, Clerk, Inngest, Stripe

CS Fundamentals: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks, Agile

WORK EXPERIENCE

Machine Learning Intern, CodSoft (Virtual)

2026

- Developed 3 predictive ML models in Python, including Credit Card Fraud Detection (classification, data preprocessing) and SMS Spam Detection (NLP, text vectorization).
- Created a Customer Churn Prediction model to analyze usage patterns and forecast customer attrition.

PROJECTS

AetherMed – Full-Stack Healthcare Queue System | *Next.js, TypeScript, Prisma, PostgreSQL*

- Engineered a real-time clinic queue platform backed by a cloud Neon PostgreSQL database via Prisma ORM.
- Implemented asynchronous API endpoints for on-the-spot appointments, sequential token logic, and live status updates.
- Developed a background polling engine that synchronizes wait times and drives auto-dismissing live notifications.
- Secured private dashboards with authorization checks and hydration guards, moving the app from mock data to a real-time cloud pipeline.

GhostOps – Autonomous AIOps Incident Response Platform | *Python, CrewAI, Kubernetes, Terraform*

- Architected a solo, end-to-end AIOps platform that autonomously detects failures, identifies root cause, generates a code patch, tests it in a sandbox, and opens an auto-generated pull request for human approval.
- Orchestrated a 3-agent CrewAI pipeline (root-cause analysis, patching, verification) triggered by Prometheus/Alertmanager and GitHub Actions webhooks, policy-gated via OPA/Gatekeeper and Vault.
- Verified the pipeline on 2 real incident classes injected via Chaos Mesh: capped a memory-leaking cache (PR #3) and fixed a failing CI test (PR #4), both opened autonomously.
- Developed the FastAPI alert-intake service; failed sandbox or OPA checks abort the run before any PR.

Sahayak – Farmer-to-Consumer Marketplace | *Next.js, FastAPI, PostgreSQL*

- Delivered a full-stack farmer/dairy-cooperative-to-consumer marketplace with a FastAPI/PostgreSQL backend and a Next.js/TypeScript frontend.
- Created a disaster-relief mode with emergency SOS requests and an NGO claim/fulfill workflow, plus a mandi-hub distribution model routing orders through regional pickup points.
- Integrated live agricultural market pricing, JWT/bcrypt authentication, and a Gemini API-powered AI agent; deployed to production on Vercel (frontend) and Render (backend).

EDUCATION

APS College of Engineering – Bachelor of Engineering, Computer Science Engineering; CGPA 7.74/10 2023 – 2027

Jnanodaya PU College – PCMB; 84.9% 2021 – 2023

MMVS High School – 83.9% 2011 – 2020

CERTIFICATIONS

AWS Certified Cloud Practitioner · AWS Certified AI Practitioner · Computer Networks (Simplilearn) · Oracle AI Foundations · Unified Language Training (Infosys Springboard)

ACHIEVEMENTS & LEADERSHIP

- Received a Certificate of Appreciation for Namma JobAthon '24.
- Participated in the NASA Space Challenge Hackathon at Dayananda Sagar.
- Coordinator Lead, MEGHAHERTZ Fest · Rotary Youth Leadership Award (RYLA) 2024 · Rotaract Club of APSCE
